

MATERIAL / MANHANDLING WINCH

Our standard winch is designed for personnel riding, material handling, rescue, and evacuation. It includes a 115-foot galvanized steel cable that can support a worker load from 130-310 lbs. The winch is compatible with the Malta Dynamics tripod using the 3-way recovery self-retracting lifeline bracket. The winch offers the ability to raise or lower a worker to safety or lock them in place. Once installed, the winch cable is fed through the head of the tripod and placed on the built-in pulley wheel. Then, personal fall arrest systems should be attached and used in conjunction with the winch.

KEY FEATURES

1. Locking Pin Secures Winch in Place on Bracket
2. Rotating Handle for Continued Winching

- Sturdy Design for Smooth Cable Control
- Super Durability
- Self-locking Snap Hook Included
